New or adjusted vehicle crossings to be installed in accordance with Herts Highways requirements.

Proposed new private foul drainage to connect to existing system. Existing pipework to be exposed and levels/condition checked prior to any works commencing.

**General Engineering Notes**

1. This drawing shall be read in conjunction with all other relevant architects and engineers drawings.
2. It is the contractors responsibility to locate existing services where they may be affected by proposed works.
3. Design and construction details for all new or amended vehicle crossings to be approved by Herts Highways.
4. Where private drives fall towards adoptable highways, surface water run off shall be prevented from draining onto public areas with the use of a dished channel and yard gully or proprietor drainage channel located at the rear of adoptable footpath.
5. Where private drives fall towards private garages, a drainage channel with internal fall shall be used to prevent flooding of garages. Channels to be 'Aco' or similar approved.
6. Minimum falls of 1:80 unless noted otherwise.
7. All adoptable drainage shall be either clay, to BS65 with either socket or sleeve joint or concrete to BS5911 part 1.
8. All domestic drainage beneath adoptable highways shall be vitrified clay extra strength and with concrete bed and surround should cover be less than 1200mm.
9. Any discrepancies, ambiguities or anomalies in the information provided on this or any of the engineering drawings package must be reported prior to work proceeding.
10. The last or disconnecting length of any building drainage system which connects to adoptable or
11. Block paving in adoptable carriageways to be as required.
12. Any service strips and areas within the road junctions (non footway or carriageway) shall be grassed.
13. Gullies shall not be placed within the limits of dropped crossings used by pedestrians or vehicles unless required for a low point.
14. Stop cock and meter covers shall not be located within vehicular crossing construction.
